\begin{align*}
5 \times 6 &= 30 & 2 \times 6 &= 12 & 4 \times 5 &= 20 \\
6 \times 5 &= 30 & 6 \times 2 &= 12 & 5 \times 4 &= 20 \\
3 \times 8 &= 24 & 4 \times 7 &= 28 & 5 \times 9 &= 45 \\
8 \times 3 &= 24 & 7 \times 4 &= 28 & 9 \times 5 &= 45 \\

\]

1. Look at \(6 \times 5\) and \(5 \times 6\). How does the order of the factors change the product?  
   **Answers will vary. Possible answer: The order of the factors does not change the product.**

2. Draw two arrays to show \(4 \times 7\) and \(7 \times 4\).  
   **Answers will vary. Arrays should show 4 rows of 7 objects and 7 rows of 4 objects.**
Using Grouping to Multiply

Draw parentheses around the numbers you want to multiply first. Then find the product. Groupings may vary. Possible groupings are shown.

   \(7 \times (4 \times 2)\)
   \(4 \times 2 = 8, 7 \times 8 = 56\)

10. \(6 \times 3 \times 3\)
    \(6 \times (3 \times 3)\)
    \(3 \times 3 = 9, 6 \times 9 = 54\)

11. \(3 \times 3 \times 10\)
    \((3 \times 3) \times 10\)
    \(3 \times 3 = 9, 9 \times 10 = 90\)

12. \(2 \times 3 \times 4\)
    \((2 \times 3) \times 4\)
    \(2 \times 3 = 6, 6 \times 4 = 24\)

13. How did you decide which factors to group?
    
    Answers will vary. Possible answer: I looked for factors that were basic facts.

14. Choose one problem. Tell two ways you can group the factors. Then explain which way is easier for you to solve.
    
    Answers will vary. Possible answer: \(3 \times 3 \times 10 = 90\). I can group the factors:
    \((3 \times 3) \times 10, \text{ or } 3 \times (3 \times 10)\). It is easier for me to solve \(9 \times 10\) because I know the 10 facts.
Using Order and Grouping to Multiply

Order and group the factors to show how you want to multiply. Then find the product. Possible orders and grouping are shown.

1. \(5 \times 7 \times 2\)
   - \(5 \times 2 \times 7\)

7. \(3 \times 9 \times 3\)
   - \(3 \times 3 \times 9\)
   - \((3 \times 3) \times 9\)

13. What strategies did you use to decide how to order and group the factors?
    
    Answers will vary. Possible answer: I looked for factors with a product that was 10 or less. I wrote those factors next to each other, and multiplied them first.

14. Why do you need to reorder factors in some problems?
    
    Answers will vary. Possible answer: If you don’t know how to multiply two factors, and more than two factors are given, you can write the factors in another order and group factors together that are easier to multiply.
