

Number Squares

Your Challenge

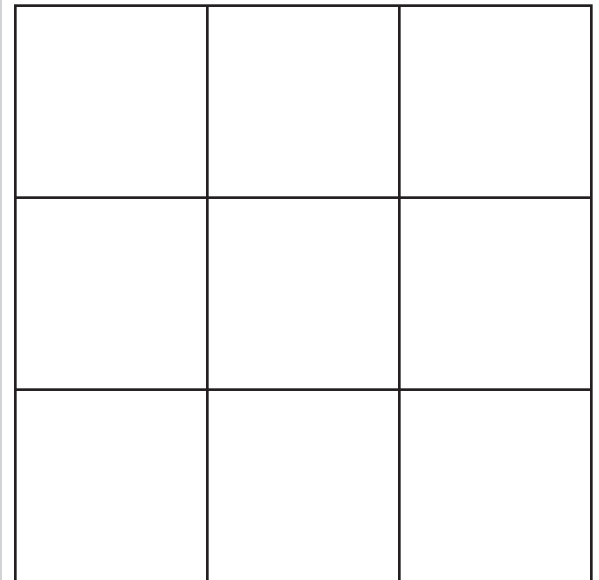

Use these dot cards.

Draw dots in each row to show 6.

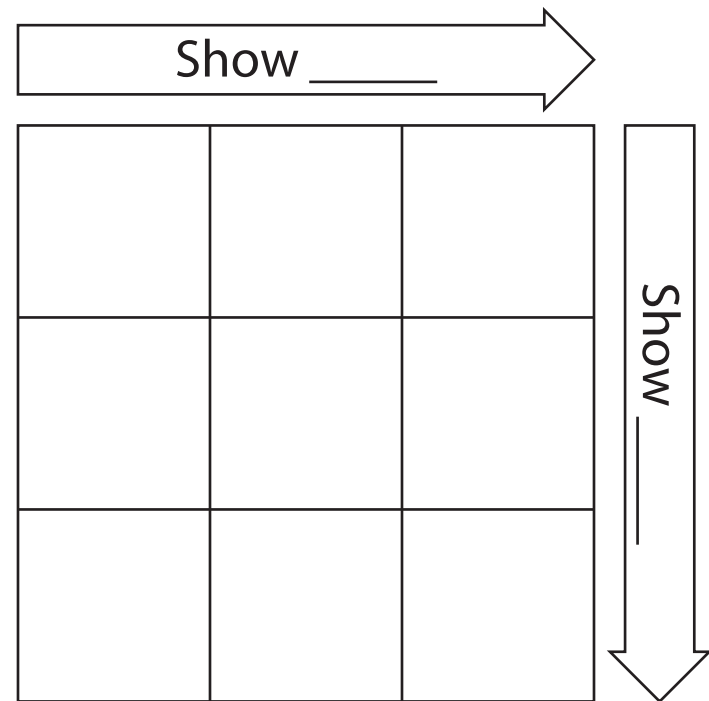

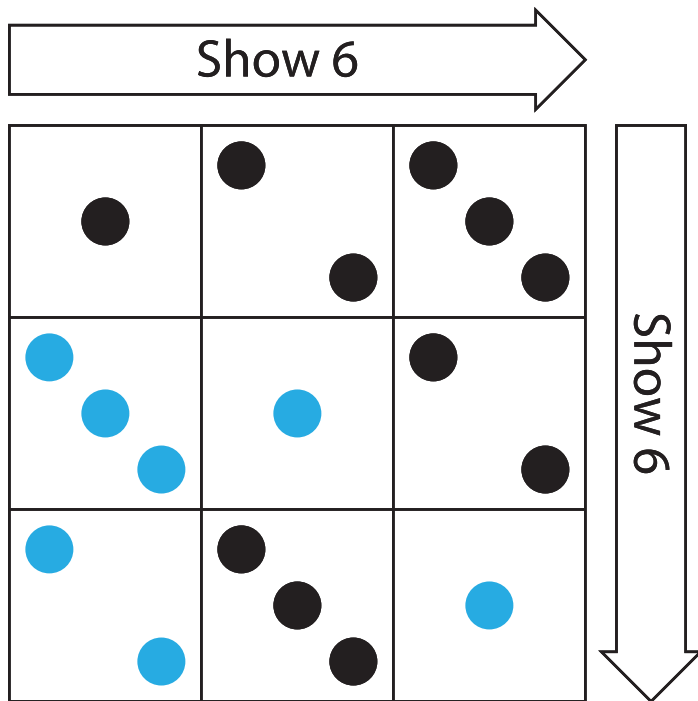

Make your own.

Children draw dots to show totals. Have children draw dots in the first square on the **Recording Sheet** so the number of dots has a total of 6 in each row and in each column. Then have children choose a different number from 4 to 9 to show dots with that total in the second square on the **Recording Sheet**.

Number Squares

Check that the dots children draw show totals that match the number they chose.
